(57) Abstract:

PURPOSE: To improve the operation efficiency by shortening the time required to insert or extract an additional circuit board (option board).

CONSTITUTION: The option board 9 extends (adds) a function of an electronic filing device and can be mounted in one of plural extension slots 20. Each extension slot 20 consists of sockets 21 and 22, etc., which engage the end part of the option board 9 and also electrically connect the option board 9 to a device main body 1. For each extension slot 20, a mechanical switch 23 such as a DIP switch is provided. The mechanical switch 23 is so constituted as to supply or cut off electric power to each option board 9, and consequently while the power source of the device main body 1 is held ON, each optional board 9 can be inserted or extracted by turning OFF only the mechanical switch 23.
